Brand New Book ***** Print on Demand *****.Excerpt from Roentgen X-Ray Apparatus and Accessories: Apparatus for the Generation and Application of High Frequency Currents, Apparatus for the Therapeutic Application of Light Energy With the majority of experimenters the first Roentgen pictures displayed concealed metallic objects and the outline of the human hand. They were all equally faulty, indistinct and deficient in clearness of contour. The X-Rays, in these earlier experiences, emanated from different points, mainly from the glass walls of the tube upon which the cathode rays were impinging. Under such conditions the extensive use of X-Rays by physicians for therapeutic purposes was out of the question. Then Roentgen himself or his associate Zehnder supplemented his first discoveries by an additional communication. In paragraph 20 of this communication published in the proceedings of the Physico-Medical Society of Wurzburg he announced that he was then using a discharging apparatus (X-Ray tube) in which a concave aluminum mirror served as a cathode and a platinum disc as an anode. If it had not been possible by such means to produce a central projection the general use of X-Rays for the inspection of the thorax and pelvis might have been impossible. From this moment, with the discovery of the so-called focus tube, the Roentgen system may be said to have begun. In order to understand the first as well as the subsequent stages of the evolution of this question we must understand with clearness the conditions under which this system can be of service. The Roentgen technique is a technique which belongs to the domain of physics, and must refer back to that foundation at every step in its progress. Consequently it differs materially from the electro-technique...
